

KEMFLEX CHEMICAL RESISTANCE CHART (UHMWPE)

Applies to N2700 Kemflex, N2718 Super Kemflex, N2836 Kemflex Steel Max, N2916 Kemflex SD EN 12115

The table below summarizes the results of various chemical resistance tests conducted on the material used for the hose tube—the component that comes into direct contact with chemicals. Testing was performed on 50mm (2") x 25mm (1") x 1mm (0.040") samples of the tube material, aged for 55 days in the specified chemical environments at two different temperatures: 68°F and 140°F. Please use this chart as a general guideline only. These results reflect the behavior of the tube material alone and do not represent testing of the complete hose assembly. Actual performance may vary depending on application-specific factors and additional environmental or mechanical stresses.

Symbols	
E	Excellent - Swelling is < 3%, or alternatively, weight loss is <0.5%. Break elongation not significantly impacted.
T	Tolerable - Swelling is 3 - 8%, or alternatively, weight loss is 0.5% - 5% and/or break elongation decreased by <50%.
X	Not Recommended - Swelling is > 8%, or alternatively, weight loss is > 5% and/or break elongation decreased by >50%.
D	Discoloration

+	Aqueous solutions in all concentrations
++	Under slight mechanical stress
+++	Or alternatively boiling point

Substance	68°F	140°F	Substance	68°F	140°F
4-Methyl-2-pentanol	E	E→D	Calcium chloride, 10% +	E	E
Acetaldehyde	E	T+	Camphor	E	T
Acetic acid, 10%	E	E	Carbon disulfide	T	N/A
Acetic acid, 100% (glacial)	E	E	Carbon tetrachloride	T++→X	X
Acetic anhydride	E	T	Carbonic acid	E	E
Acetone	E	E+++	Castor oil	E	E
Acids, aromatic	E	E	Caustic potash	E	E
Acrylic Acid	E	E & higher	Caustic soda	E	E
Acrylonitrile	E	E	Chloral hydrate +	E	E
Allyl alcohol, 96%	E	E	Chlorine gas, dry	T	X
Alum	E	E	Chlorine gas, moist	T	X
Aluminum chloride +	E	E	Chlorine, liquid	X	X
Ammonia +	E	E	Chloroacetic acid (mono)	E	E
Ammonia, gaseous	E	E	Chlorobenzene	T	X
Ammonia, liquid	E		Chloroethanol	E	E
Ammonium salts +	E	E	Chloroform	T++→X	X
Amyl acetate	E	E	Chlorosulphonic acid	X	X
Aniline	E	E	Chromic acid, 10%	E	E
Anisole	T	T→X	Chromic acid, 80%	E	T
Antimony trichloride	E	E	Citric acid, 10% & conc.	E	E
Aqua regia	X	X	Clophen A50 & A60	E	T→X
Beer	E	E	Coconut oil	E	T
Beeswax	E	T++→X	Common salt, aqueous, saturated	E	E
Benzaldehyde	E	E→T	Copper salts +	E	E
Benzene	T	T	Corn oil	E	T
Benzenesulphonic acid	E	E	Creosote	E	E
Benzoic acid +	E	E	Cresol	E	E
Benzoyl chloride	T	T	Cyclohexane	E	E
Benzyl alcohol	E	E	Cyclohexanol	E	E
Borax +	E	E	Cyclohexanone	E	T
Boric acid +	E	E	Dekalin®	E	T
Brine (saturated)	E	E	Desiccator grease (Merck 4318)	E	T
Bromine, liquid	X	X	Detergents, synthetic	E	E
Bromochloromethane	X	X	Dibutyl ether	E→T	X
Butanol	E	E	Dibutyl phthalate	E	T
Butoxyl (Methoxy butyl acetate)	E	T	Dichloroacetic acid methyl ester	E	E
Butyl acetate	E	T	Dichloroacetic acid, 50%	E	E
Butylene glycol	E	E	Dichloroacetic acid, 100%	E	T
Butyric acid	E	T	o-Dichlorobenzene	T	X
Calcium carbonate, 10%	E	E	p-Dichlorobenzene	T	X
Calcium chloride, conc.	E	E	Dichloroethylene	X	X
Calcium hypochlorite, bleach +	E	E	Diesel fuel oil	E	E
Calcium nitrate, 50%	E	E	Diethyl ether	E→T	T+++
