

Multi-Functional

CHEMICAL HOSE

Goodall® Knows Chemical

Over 50 years ago, we invented Goodall Kemflex, the first hose specifically formulated for a broad spectrum of chemicals. Over a half-century later, the latest version of Kemflex is still the industry benchmark. Goodall's Kemflex hoses are the most resilient, best-built UHMWPE chemical hoses on the market.

Goodall® Chemical Hose Construction

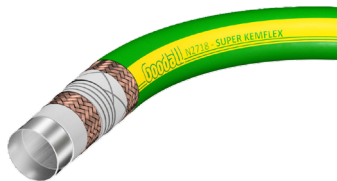

- Built with a highly impermeable, yet flexible, Ultra High Molecular Weight Polyethylene (UHMWPE) tube that is resistant to 95% of the chemicals being used in the industry.
- Reinforced with high-tensile textile or brass-plated steel wire braids that provide better strength, flexibility, kink resistance, and durability than competing spiral-reinforced hoses.
- The tube and reinforcement of our chemical hoses are protected by a tough EPDM cover specifically blended to resist abrasion, chemicals, sunlight, and ozone, providing longevity and peace of mind.

Whether durability, strength or kink and crush resistance is your most important requirement, Goodall has a chemical hose that will get the job done with long-lasting superior performance!

GOODALL® N2700 Kemflex

- Our most popular chemical hose.
- FDA compliant UHMWPE tube
- Braided construction provides outstanding strength and resistance to kinking
- Dual steel helix wire for added stability

GOODALL® N2718 Super Kemflex

- Superior kink and crush resistance
- FDA compliant UHMWPE tube
- Lighter weight due to the monofilament helix
- Monofilament helix allows Super Kemflex to bounce back to its original shape even after being run over or crushed
- This is not a standard stock item. Please contact your LGG Industrial representative to discuss minimum order quantities, lead times, and potential future stocking arrangements
